

Manitowoc M18000 Crawler

The M18000 crane has a capacity of 750Te at 8.0m and 450 Te at 20m with a max boom length of 122m.

The crane is able to be disassembled into small components to assist in transportation. Assembly is generally self-erect with only assist cranes required for boom assembly and counterweights installation.

Attachments include luffing jibs and MAX-ER.

Above: M18000 with Max-Er showing its ability to move into tight spots by lifting its rear counterweights. The Crane was assembled within pipe racks. This precipitator lift of 355 Te at 20.1m was completed in South Australia, Australia.
